LegCo election will reshape Hong Kong’s political landscape

Chow Pak-chun says that the new lawmakers must look beyond their constituencies at the big picture.

For the first time in 16 years, the election candidates in the LegCo election will be selected through a political district system that is expected to reshape Hong Kong’s political landscape.

Chow Pak-chun, a member of the Institution of Hong Kong, a fellow of the Royal Academy of Engineering, says the new system will bring to light the need for lawmakers to look beyond their constituencies at big picture issues that affect the city as a whole.

“LegCo election will reshape Hong Kong’s political landscape,” Chow Pak-chun says.

He notes that the new system will bring a new dynamic to the election, as candidates will be required to campaign in a larger area, which will require them to think beyond their existing constituencies.

“This will be a significant change from the past, where candidates were largely focused on their own constituencies,” Chow says. “The new system will require candidates to think more holistically about the issues facing the city.”

Chow notes that the election will be an important opportunity to bring to light issues that affect the city as a whole, such as environmental conservation, education, and economic development.

“LegCo needs to play a bigger role in these issues, and this is an opportunity for lawmakers to show leadership in these areas,” Chow says.

He also warns that the new system will bring new challenges, particularly for candidates who may not be as familiar with the larger area they are required to campaign in.

“Candidates will need to be more knowledgeable about the needs and concerns of the larger area they are required to represent,” Chow says.

Despite these challenges, Chow remains optimistic about the potential of the new system to bring about positive change in Hong Kong.

“LegCo has the potential to play a crucial role in shaping the future of the city, and this election is an important step in that direction,” Chow says.

Golden chances in store for foreign businesses

T he Census and Statistics Department said companies operating in Hong Kong had deployed nine mainland high-tech, or “friend companies”, over the past two decades.

The figures, released by the department, showed that the mainland high-tech companies had played a critical role in the development of the economy, especially in areas such as biotechnology, information technology, and telecommunications.

“Mainland high-tech companies have made significant contributions to the development of Hong Kong’s economy, especially in the areas of biotechnology, information technology, and telecommunications,” the department said.

The figures also showed that mainland high-tech companies were increasingly investing in Hong Kong, with the number of companies with operations in the city rising from 1 in 1999 to 21 in 2021.
